Keynote

Florian Rampelt

“Data Literacy: Why do we need it, what does it mean and how can we achieve it?”

The keynote will discuss data literacy as an overall necessity for education, science, economy, and society. It will introduce five guiding principles that characterise the importance and role of data literacy. Based on this it will propose different digital formats for learners to acquire knowledge, skills, and qualifications in this field and to develop relevant values and attitudes to deal with data in a conscious, critical, and ethically sound manner.

Florian Rampelt is Managing Director of the AI Campus and Deputy Managing Director of Hochschulforum Digitalisierung (HFD). His work focuses on European collaboration in education as well as strengthening data literacy and AI skills. Previously, he was Director of Education at Kiron and research assistant at University of Passau. His research focuses on open education, recognition, and digital credentials.
